TCPS

THE CAR PARK SOCIETY INC.

Annual Report FY2025/26

Phase Zero: The Rupture

Acknowledgement of Place

The Car Park Society Inc. operates from Te Whanganui-a-Tara, a city shaped by layers of whenua, awa, harbour, settlement, reclamation, colonial development and living memory. Our work begins with an awareness that every site carries histories, relationships and stories that existed long before we arrived.

We acknowledge mana whenua of Te Whanganui-a-Tara, including Te Āti Awa and Taranaki Whānui ki Te Upoko o Te Ika. We recognise their enduring relationship with the whenua, moana, awa and places in which we work, and acknowledge the authority, knowledge and whakapapa held within these relationships.

The places TCPS works within are not neutral spaces. Te Aro, Waimapihi, the harbour edge, the streets, buildings, asphalt and concrete all sit within a much deeper landscape of whakapapa, occupation, displacement, reclamation and ongoing cultural presence. We have a responsibility to approach these places with respect, humility and care.

As an emerging Society, TCPS acknowledges that meaningful relationships with mana whenua require time, care, reciprocity and accountability. Ensuring the mana of Te Āti Awa and Taranaki Whānui is acknowledged is an ongoing priority for TCPS as we develop our work and our presence within Te Whanganui-a-Tara.

Our commitment is to continue learning how to work responsibly in the places we occupy, recognising that reclamation must begin with respect for those whose relationship with this whenua is enduring.

Co-Chairs' Transmission

From the Control Room to the next rupture

The Car Park Society was never established simply to produce art projects.

We formed around a larger idea: the spaces, stories and systems around us can change. The histories beneath our cities continue to shape the present. Communities have the power to come together and reclaim space, memory and agency.

Our kaupapa, Te Mana Whakatete, gives that proposition its foundation. It calls us to remember, resist, create and act collectively.

It asks us to look beneath the surface. Reclamation is about where we work and how we work with each other, our communities, our networks and the places we inhabit.

This year we took an important step in turning that kaupapa into something tangible:

Phase Zero - The Control Room.

What began as an idea became a working space for creative experiments, broadcasting, storytelling, technology, gathering and connection. It showed that TCPS can turn an unconventional idea into a public project. It also tested our systems, creative language, relationships and ability to work together.

That achievement belongs to far more people than the Committee. It belongs to our volunteers, artists, makers, technicians, storytellers, collaborators, supporters, stakeholders and partners who contributed their time, skills, ideas, resources and belief. It belongs to everyone who watched, participated, questioned, contributed or simply showed up.

TCPS is a network before it is an organisation. That network is one of our greatest strengths. Our strength has never been having the biggest budget, largest team or most conventional infrastructure. It has been our ability to bring people together around an idea and make something from what is available.

Entry to The Control Room

The Control Room proved that this model has substance, and that our collective capability is greater than the sum of its parts. It also reminded us that meaningful creative work takes time.

This year brought significant change for our people. For Aimee, one of our Co-Chairs, it included pregnancy and the birth of her pēpi. This was a joyful and important moment for our Society, and it naturally shaped capacity and priorities across the year.

It gave TCPS an opportunity to practice the values we speak about. Te Mana Whakatete asks us to build in ways that honour the people carrying the work. A collective is strongest when it makes space for community, care and sustainable practice. We know that meaningful work is built through different seasons.

Sometimes that means pushing forward. Sometimes it means holding position. Sometimes it means making space for life.

In 2026, we made space for life.

Some projects are in a period of gestation. They have not disappeared. They are gathering strength beneath the surface.

TO OUR NETWORK

To our volunteers, artists, creatives, technicians and collaborators: thank you for trusting the experiment and turning ideas into physical reality.

To our stakeholders, supporters and partners: thank you for opening conversations, sharing resources and helping us navigate unfamiliar territory.

To our wider Watcher Network: thank you for watching, participating and staying curious.

And to those who have challenged us or asked us to sharpen our thinking: thank you too. A living Kaupapa must be capable of scrutiny, reflection and change.

CALL TO ACTION

As we look towards 2027, our message is simple: the next phase requires more of us. Not necessarily more money. Not necessarily more noise. More participation. More ideas, more hands, more skills, more relationships, more courage and more people willing to step into the work.

If you have an idea, bring it. If you have a skill, share it. If you have a space, open the conversation. If you have resources, help us activate them. If you have a story, help us find the right way to tell it. If you have been watching from the edges, this is an invitation to step closer.

Te Mana Whakatete calls us to move from observation into action. That has always been the point of the Watcher.

To watch is only the beginning.
To remember is to recognise.
To recognise is to respond.
To respond is to reclaim.

The Control Room has shown us what is possible. The next transmission is bigger.

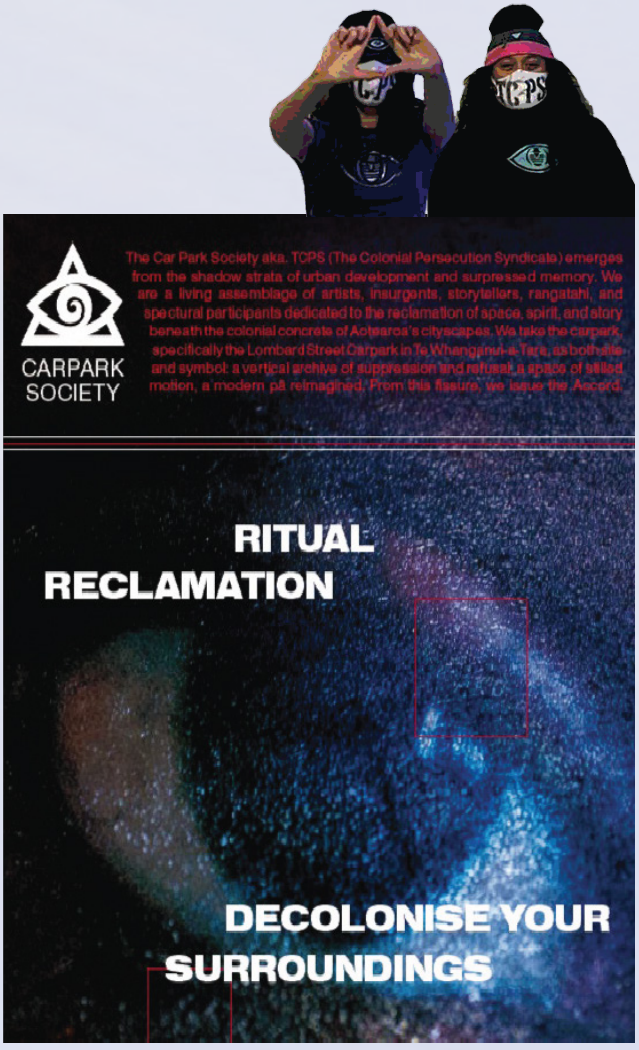

We are preparing for the Induction Centre. We are preparing for 2027. And we are preparing together.

Ka mua, ka muri. We move forward by carrying what we have learned with us.

The signal remains active.
The network remains open.
The Sequence continues.

Ngā mihi nui.

George & Aimee
The Co-Chairs
The Car Park Society Inc

Who We Are

Artist-led. Ritual research. Urban reclamation.

The Car Park Society Inc. (TCPS) is an incorporated society based in Te Whanganui-aTara. We are a Māori-led creative organisation with community at its centre. Our work brings together art, culture, urban space and collective action.

TCPS creates experiences that invite people to take part. We turn overlooked urban spaces into places for storytelling, cultural memory, reflection, resistance and public engagement.

Our work brings together installation, performance, oratory, changes to urban space, archive research, digital media, public participation and urban mythology. We work in physical and digital spaces to uncover buried stories; question inherited narratives and help people engage with the city in new ways.

At the centre of this practice is Te Mana Whakatete, a living kaupapa for reclamation, resistance and future sovereignties.

It guides how TCPS thinks about and creates its work. This means reclaiming space, spirit and story; upholding tino rangatiratanga and mana motuhake; honouring whakapapa; and helping people take part and act together.

For TCPS, the city is not simply a backdrop. It is an archive. Beneath its concrete, infrastructure and commercial spaces are histories, memories, relationships and narratives that have been suppressed,displaced or overlooked.

Our work seeks to bring these layers back into view, transforming forgotten and underused spacesinto places of encounter, imagination, cultural resurgence and return.

Our practice is grounded in Te Ao Māori values, urban Māori practice and our commitment to Te Tiriti o Waitangi.

We are interested in the relationship between past and future, surveillance and sovereignty, technology and whakapapa, disruption and remembrance.

We use art as a means of asking difficult questions, creating new narratives and activating people rather than simply presenting work for observation.

TCPS is incorporated under the Incorporated Societies Act 2022, is GST registered and is not currently a registered charity. Our constitutional purposes include supporting creative practitioners and exploring historical, cultural and spatial themes.

They also include reclaiming space through creative expression and community engagement, delivering public programmes and encouraging critical dialogue. We also produce media, publications, audiovisual content and digital art.

TCPS exists to create in the cracks, reclaim what has been overlooked and amplify Indigenous narratives. We build the relationships, networks and creative infrastructure needed for radical futures.

FY2025/26 at a Glance

The signal became a society.

FY2025/26 was a formative year for The Car Park Society Inc. We became an incorporated, Māori-led creative organisation. We also continued to develop Te Mana Whakatete as the kaupapa guiding our work.

The year saw TCPS deliver The Control Room, our first major public activation, bringing together immersive installation, technology, storytelling and participation.

The project demonstrated the creative potential of our practice and strengthened our growing network of artists, volunteers, collaborators and supporters.

We adopted an updated Constitution in September 2025. It broadened the Committee structure and strengthened our commitments to Māori-led governance, tikanga and Te Tiriti o Waitangi.

Later in the year, we conducted the Sustainability and Growth Project. We began building practical systems for funding, membership, communications and operations.

We also adopted a Funding and Resourcing Strategy and a Membership and Community Engagement Model to support our future development.

Together, these developments established a stronger foundation for the next phase of TCPS, with the Induction Centre in 2027 providing the next major expression of Te Mana Whakatete in action.

The Control Room: Phase Zero - The First Rupture

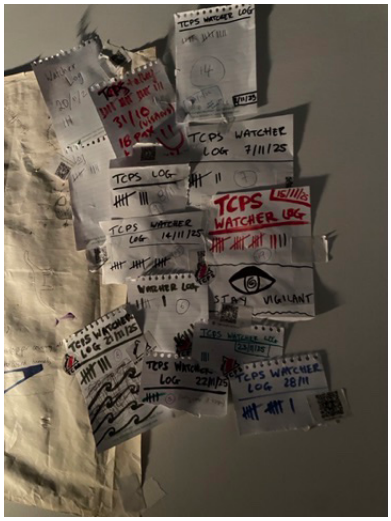

The first base. The first breach.

We developed and delivered The Control Room with Urban Dream Brokerage. It let us test our creative ideas in a public setting and establish a visible presence in the city. We are grateful to Urban Dream Brokerage for their partnership, support and willingness to provide TCPS with the space and opportunity to experiment and develop the work.

The Control Room brought together installation, digital media, sound, storytelling and audience participation. It also gave us a place to develop and produce work, hold internal wānanga and connect with the emerging Watcher Network. The project showed how TCPS can combine creative, technical and community roles, and taught us a great deal about audience engagement, production, spatial design and what it takes to deliver immersive work.

The Control Room laid the foundations for the next stage of TCPS's development, including the Induction Centre planned for 2027. The relationships and lessons from the project have shaped our approach to larger-scale activation, audience growth, resourcing, documentation and partnerships. By turning an idea into a physical space, it established our creative presence and gave the Society a base to build on.

THE CONTROL ROOM OPENED AS A THRESHOLD WHERE TESTING, GATHERING, AND RECRUITMENT COLLAPSED INTO PLACE.

The Watcher Map: The City Becomes the Archive

The Control Room was the base. The Watcher Map was the breach.

During Phase Zero, TCPS began testing a public archive spread across Te Aro. QR glyphs and mapped Watchpoints let people encounter the work around the city. They extended the project beyond The Control Room at 149 Victoria Street.

Each scan opened a fragment: colonial trade, public refusal, drowned shoreline or buried awa. Together, these fragments formed the first version of the Watcher Map.

The Map matters because it shifts TCPS from event delivery into cultural infrastructure. The city itself holds the archive. Watchers can explore it outside formal activation hours. Future projects can follow the same steps: site, glyph, scan, story, return.

Watchpoint	Site / theme	What it opened
The Exchange	Bethune & Hunter Lombard Street Carpark	Colonial trade, capital and the first rupture. This Watchpoint opens the story of commerce, extraction and the systems of power that shaped the early colonial city.
The Battle	Manners Street	Riot, refusal, public disorder and resistance. This Watchpoint opens a history of confrontation in the streets, where public space becomes a site of protest, conflict and collective refusal.
Reclaimed Land	Wellington Harbour/ reclaimed shoreline	Buried shoreline, environmental memory and colonial expansion. This Watchpoint opens the layers of harbour and whenua reshaped through reclamation, revealing what was submerged, displaced and built over in the making of the city.
The Veins Beneath	Waimapihi/ hidden waterways of Wellington	Awa, flow, whenua and continuity beneath the city. This Watchpoint reveals streams and waterways that once flowed openly through the landscape. They now run beneath roads, buildings and concrete, showing the living systems that remain below the surface.

What the prototype proved:	Why it matters for TCPS:
Low-cost public engagement infrastructure works.	The Map keeps TCPS visible between activations.
People will follow clues and go deeper when invited.	The Watcher journey can become a pathway to membership.
Place-based storytelling works beyond a single event.	The city becomes a living archive, not just a venue.
Digital traces remain after physical installation ends.	The Map gives funders evidence of reach and legacy.

The Induction Centre and The Sequence

From rupture to descent

The Control Room was never the destination. It was the rupture. Phase Zero gave TCPS the chance to test its creative language, technologies, systems and approaches to participation. Projection, sound, QR glyphs, archive files, Oracle language, Watcher recruitment and public engagement became the groundwork for what comes next.

The Induction Centre is the next major expression of that work. Across seven levels, from The Root to The Eye, audiences will move through buried memory, surveillance, colonial systems of consumption and control, and into ceremony, reclamation and collective witness. Art, technology, performance, archival material and digital interaction will combine to create a space people enter and inhabit rather than simply watch.

Designed to support ongoing connection and cultural reclamation, the work will extend into the Watcher Network, digital archives and future activations. It marks the beginning of TCPS's growth: taking what Phase Zero tested and building it into a larger, more ambitious and enduring expression of Te Mana Whakatete.

The rupture opened the way.
Now we descend.

Level 1	*The Root*	Connecting with what lies beneath the city: buried memory, the awa (river) and whenua (land) that remain underneath.
Level 2	*The Waking*	The first moment of awareness. Something glitches, the surface cracks, and the city begins to speak.
Level 3	*The Mirror*	Being watched and seeing yourself reflected. Explores surveillance and identity, with the car park as a living archive.
Level 4	*The Hunger*	Systems that consume. Explores bureaucracy, consumption and longing, and how institutions swallow people and stories.
Level 5	*The Invitation*	A threshold. Audiences choose whether to step forward and take part, moving from observers into ceremony.
Level 6	*The Self*	Piecing yourself back together. Moving from fragmentation towards a shared, collective identity.
Level 7	*The Eye*	Becoming the witness. Surveillance is turned around, and audiences hold collective memory rather than being watched.

Looking Ahead: FY2026/27

The next descent.

FY2026/27 is about moving from planning into action. Over the past year, TCPS has strengthened its governance, creative direction, relationships and systems. Our priority now is to turn ideas into well-supported projects.

Our Funding and Resourcing Strategy will help us grow sustainably. Rather than chasing every opportunity at once, we will target the right funding for equipment, operations, organisational development and project delivery. Alongside this, we will gradually develop income through membership, koha, workshops and, in future, equipment hire.

The goal is to support bigger ideas, involve more people and deliver projects with confidence, while keeping the flexibility, experimentation and collective spirit that make TCPS what it is.

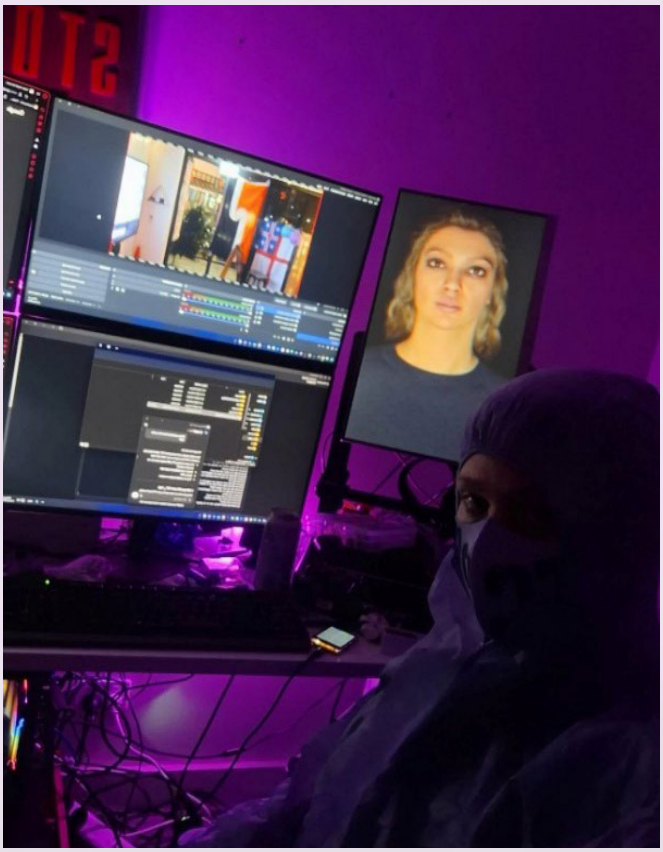

Priority	What success looks like
Deliver The Induction Centre	Progress towards 2027 on the concept, scope and budget. Develop the creative and production team, venue strategy, funding options and delivery plan.
Expand the Watcher Map	Establish new Watchpoints and improve how we measure scans and engagement. Make it easier for people who take part in physical projects to join the wider Watcher Network.
Launch membership model	Invite founding Watchers to become members. Send regular member updates and make it easy to contribute koha.
Formalise The Collective	Establish and consistently use clear arrangements for collaborators. Cover roles, agreements, crediting and fair-pay principles.
Strengthen mana whenua and sector relationships	Begin conversations early, seek guidance and build relationships over time. Where appropriate, seek letters of support or develop ways to work in partnership.
Build the funding and revenue system	Set up funding applications, project budgets, the Funding Tracker and reporting processes. Hold regular reviews and gradually test ways to earn income.
Strengthen capacity	Assess volunteers' time, skills and workload before making major commitments. Put systems in place to share responsibility and help people stay involved at a manageable level.
Build evidence of impact	Consistently record audience numbers, participation, feedback, digital engagement and other relevant measures. Use this evidence to improve future plans and funding applications.
Embed learning into systems	Keep and reuse the knowledge, systems, records and relationships developed through each project. Each activation should leave TCPS stronger for the next.

Research, Technology and Data Sovereignty

Our digital future on our terms.

Technology plays a growing role in how The Car Park Society works and creates. We ask who builds it, who controls it, where information is stored and who benefits.

Our commitment to data sovereignty is central to this work. We are developing systems controlled by our community, so we depend less on external platforms. This gives TCPS greater control over our information, intellectual property, digital systems and technological future.

Our research and development work includes The Oracle. Research & Development Officer Ben Pupich is developing it in-house. The Oracle began as an experimental AI system in The Control Room. Its research also informs how TCPS could develop and govern its own technologies. We are exploring how to build, understand and control these systems ourselves.

This includes building our own cloud infrastructure and digital systems. These could support creative projects, membership hosting, communications, digital archives, community participation and future services.

These systems could let TCPS build digital spaces around our own kaupapa. We would be less dependent on commercial platforms. We do not control those platforms' priorities, algorithms, data practices or terms of service.

For TCPS, this is fundamentally a question of power and agency. Communities have historically had information collected about them, categorised by others and stored in systems they did not design or control. Digital technology can reproduce those relationships at enormous scale. Our response is not to reject technology, but to develop the capability to participate in its creation and governance.

We believe communities should decide how their information is collected, interpreted and stored. They should also decide who can access it and how it may be used in the future. This is particularly important when working with cultural knowledge, community histories, creative intellectual property, membership information and records of participation.

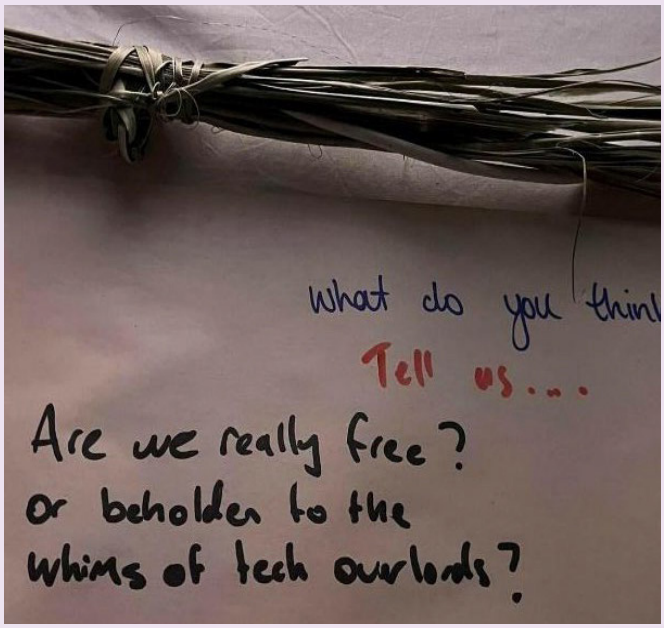

Our digital systems are part of a wider approach to building technology with communities. We aim to create useful, adaptable systems that are accountable to the communities and kaupapa they serve.

Where possible, TCPS seeks to own and control the infrastructure that supports our work.

This approach also creates opportunities for the Society to develop its own intellectual property, technical knowledge and research capability.

The Oracle, cloud development, digital archives, potential membership infrastructure and future technology projects are not isolated initiatives; they are components of a longer-term strategy to build creative and technological sovereignty.

The work is still developing. TCPS is an emerging organisation, and these systems need more research, testing, investment and careful governance. We want to build the skills and infrastructure that give communities greater control over their digital futures.

For TCPS, data sovereignty is ultimately about taking back control - of our information, our stories, our infrastructure and our ability to determine what happens to them next.

Behind the scenes of The Control Room

Community and Audience Engagement

The Watchers entered.

In FY2025/26, we built relationships through shared creative experiences, collaboration and participation. The Control Room let us connect directly with audiences in a physical space. Digital activity, livestreams and online content extended that connection beyond the tenancy.

Collaboration was central to this work. TCPS worked across creative, technical and community networks, bringing together artists, volunteers, supporters and collaborators to contribute skills, ideas and practical knowledge. These relationships strengthened the Society's ability to develop and deliver projects collectively and provided a foundation for future partnerships.

The year also highlighted the importance of creating different ways for people to engage with TCPS. Some participated directly in projects, while others connected through digital platforms, events, content, volunteering or informal networks. Our approach is to build relationships over time rather than treat audiences as one-off visitors.

During the year, TCPS began making it easier for people to stay involved through membership, creative collaboration and volunteering. We developed a Membership and Community Engagement Model, which the Committee approved in June 2026.

Looking ahead, TCPS intends to deepen these relationships through stronger partnerships with artists, community organisations, cultural networks, mana whenua, local stakeholders and other creative practitioners.

The Induction Centre will provide an important opportunity to expand this approach, creating more meaningful ways for people to contribute, collaborate and participate.

We aim to build a connected and active community around TCPS. We value participation and collaboration that benefits everyone involved. People can contribute to our creative work through their own skills, interests and relationships.

Governance: The Society Takes Form

From myth to mandate.

In FY2025/26, The Car Park Society Inc. grew from an emerging creative collective into an incorporated organisation. We also strengthened our governance.

The Car Park Society Inc. was incorporated on 6 May 2025 under the Incorporated Societies Act 2022. This established the Society as a registered incorporated society and provided the formal legal and governance framework for its ongoing operations.

As TCPS developed, we needed a governance structure that better reflected our scale, kaupapa and future direction. On 18 September 2025, Members adopted an amended Constitution with major changes to governance.

The amended Constitution strengthened the Society in several key areas:

- Governance structure: The Committee was expanded from three Officers to five - Co Chairs, Treasurer, Secretary, and Research and Development Officer.
- Māori leadership: At least 70% of the Committee must be Māori, establishing Māori-led governance as a core constitutional commitment grounded in tino rangatiratanga.
- Officer accountability: Provisions relating to Officer duties, conflicts of interest, terms of office and eligibility were strengthened.
- Membership: Explicit obligations were introduced requiring Members to promote the interests and purposes of the Society and not bring the Society into disrepute.
- Dispute resolution: Processes were strengthened to support fair, impartial and efficient resolution, including mediation, arbitration and tikanga-based practices.
- Participation and accessibility: General Meetings can be held in person or through real-time electronic communication. This helps more Members take part
- Financial and organisational continuity: Clearer provisions cover liquidation, removal from the register and the treatment of surplus assets. Surplus assets remain directed to another not-forprofit organisation with similar purposes.
- Tikanga and interpretation: The Constitution was strengthened to require that it be interpreted having regard to tikanga, kawa, culture and practice, Te Ao Māori values, and Te Tiriti o Waitangi.

These changes were more than an administrative update. They represented a deliberate step in aligning how TCPS is governed with what TCPS exists to do. The amended Constitution provides a stronger foundation for Māori-led decision-making, collective accountability, creative development and the Society's longer-term ambitions.

This governance foundation will support TCPS's next phase, including the Induction Centre in 2027. The amended Constitution gives us a clearer structure to manage growth, partnerships, membership, resources and creative activity. It also keeps us accountable to our purposes and kaupapa.

TCPS Committee Members

FY25/26 focus

CoChair — **Aimee Tutaki**

Strategic leadership, project delivery, funding/organisational development.
Oversee TCPS priorities and coordinate the Sustainability & Growth Project. Maintain the funding pipeline and support strategic relationships and future growth.

CoChair — **George Baz**

Governance, strategic oversight and organisational decisionmaking.
Support the Co-Chair in providing leadership, reviewing organisational priorities, monitoring project outcomes and ensuring TCPS activities remain aligned with its kaupapa and strategic direction.

Treasurer — **Joe Storm**

Financial oversight, budgets, resourcing and financial reporting.
Maintain financial records, support budget development, monitor income and expenditure, assist with funding applications and provide financial information for Committee decision-making and future project planning.

Secretary — **Alicia Tutaki**

Minutes, records and official communications.
Maintain Committee records, meeting minutes and organisational documents. Coordinate official communications and support stakeholder communications. Keep records of key decisions, approvals and projects.

Research and Development Officer — **Ben Pupich**

Research, development, digital infrastructure and emerging opportunities.
Research funding and development opportunities. Investigate relevant technologies and infrastructure and help develop future projects. Contribute to livestream systems, digital tools and emerging technologies where they support TCPS's work.

From Watchers to Members

The Society opens.

In FY2025/26, TCPS laid the foundations for a stronger membership community. The Watcher Network began to take shape through our projects, events, digital activity and wider creative community.

We are grateful to our founding and current members for being among the first people to formally support TCPS and help shape the Society as it develops. At the end of FY2025/26, TCPS had 26 members, representing an important early community around the organisation.

During the year, TCPS developed and approved a Membership and Community Engagement Model. It aims to make it easier for people to move from a first experience of TCPS to ongoing involvement. Membership is a relationship with the Society that goes beyond a subscription. It supports participation, communication, collaboration and TCPS's long-term future.

TCPS aims to grow its membership while keeping the connection, participation and reciprocity established by our founding members. Membership helps sustain the organisation. It also brings more people into the network and gives them a meaningful role in shaping what TCPS becomes next.

The Signal Network

Digital infrastructure for the Watcher Network.

The Signal Network brings together our digital tools. We use them to communicate, document our work and help people connect with us.

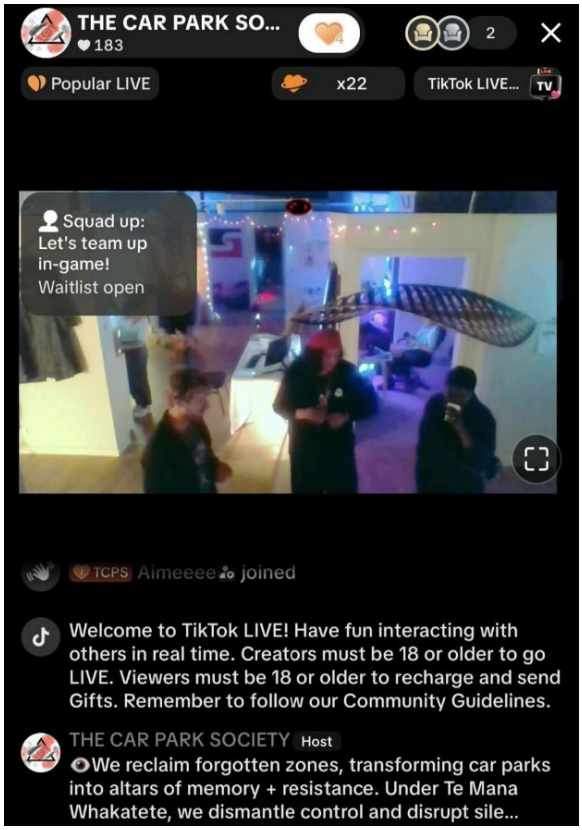

During FY2025/26, TCPS continued developing its digital presence across its website, social media, video platforms and direct communications. These channels allowed people to discover the work, follow projects, access archives, participate remotely and stay connected between physical activations.

The Control Room provided an important opportunity to test how these channels could work alongside physical projects. Digital content, livestreams, documentation and online transmissions extended the life of the project beyond physical tenancy and helped build awareness of TCPS and the wider network.

TCPS will connect these channels more effectively. This will help people move from online engagement to participation, membership, collaboration and attendance at physical projects.

Our digital channels currently serve different but connected purposes:

Channel / tool	Role
Website & Watcher map	Public identity and archive hub.
Linktree	Central linkinbio access point.
TikTok	Primary discovery channel.
Instagram	Visual identity and community anchor.
YouTube	Documentary and longform depth.
Watcher Map	Public archive and citywide portal.
Stripe	Donation pathway.
Google Form	Member application / interest capture.
Email / Transmissions	Direct relationship with Watchers and Members.

We aim to build a stronger network around the Society.

Our digital platforms will connect people, share knowledge, support creative collaboration and help people take part in our physical projects.

Partnerships, Collaborators and Supporters

Those who held the space.

TCPS acknowledges the organisations, media platforms, supporters, partners, donors, volunteers, practitioners and whānau who contributed to the development of the Society during FY2025/26.

A particular acknowledgement goes to Urban Dream Brokerage, whose partnership was central to delivering The Control Room. Their support enabled TCPS to establish a physical creative presence, test our ideas and build relationships across the city.

We shared TCPS's work through creative and media networks. This included interviews with Wellington Access Radio's B-Side Stories, RadioActive.FM and the Deep in Sessions podcast. These platforms introduced TCPS to new audiences and created space to discuss The Control Room, our practice and the Society's direction.

We approach partnerships as genuine relationships, rather than transactional exchanges. We value collaborators who contribute ideas, knowledge, resources, platforms and opportunities while respecting the Society's kaupapa and creative independence.

Supporters	Acknowledgement
Urban Dream Brokerage	TCPS thanks Urban Dream Brokerage for its support of The Car Park Society and its creative, communityled work.
Donors / koha supporters	TCPS gratefully acknowledges everyone who contributed koha to support our creative, communityfocused work.
Media and Podcast Partners	TCPS thanks Wellington Access Radio (*BSide Stories*), RadioActive.FM and *Deep in Sessions* for sharing our work with wider audiences.
Volunteers and whānau	TCPS thanks the volunteers and whānau who contributed their time, skills, care and practical support.
Collective practitioners	TCPS acknowledges the practitioners who contributed creative, technical and specialist skills to our work.

Making space for new ideas - Enlivening cities through public participation

Financial Report

Receipts, payments, in-kind support, and sustainability.

For the year ended 31 March 2026

These financial statements use a receipts and payments (cash) basis. They have been prepared in accordance with the minimum financial reporting requirements of the Incorporated Societies Act 2022. The Car Park Society Incorporated meets the Act's definition of a 'small society'.

STATEMENT OF RECEIPTS AND PAYMENTS

Opening bank balance (01-04-25)	$0.00
Receipts	
Donations received	$393.91
Total receipts	**$393.91**
Payments	
Total payments	$0.00
Closing bank balance (31-03-26)	**$393.91**

STATEMENT OF ASSETS AND LIABILITIES

Assets	
Bank balance	$393.91
Total assets	**$393.91**
Liabilities	
Total liabilities	$0.00
Net assets / accumulated funds	**$393.91**

MORTGAGES, CHARGES AND OTHER SECURITY INTERESTS

There were no mortgages, charges, or other security interests affecting any property of the Society as of 31/03/26

NOTE 1: IN-KIND CONTRIBUTIONS (MEMORANDUM DISCLOSURE)

The Society's activity for the year was the Control Room project. Alongside the cash donations shown above, the project received in-kind support through equipment, materials, venue resources and volunteer time. The estimates below are for information only. They are not included in the financial statements above.

Total project support for the year, including estimated ink-ind contributions: $11,968.91 (memorandum figure only).

Venue/space support	$4,000.00
Audiovisual equipment	$1,675.00
Oracle station and technical equipment	$500.00
Booth, partition and setup materials	$300.00
Seating and venue equipment	$200.00
Printing and creative materials	$400.00
Volunteer and project team contribution	$4,500.00

APPROVAL

These financial statements were approved on behalf of the Committee of The Car Park Society Incorporated:

Lessons from Phase Zero

What the rupture taught us.

This year, TCPS tested our creative model and the systems needed to sustain it. Lessons from The Control Room and our wider development work now guide how we plan, resource and deliver the next phase.

The central lesson from FY2025/26 is that TCPS does not need to become more conventional to become more capable.

In FY2026/27, we will strengthen the foundations around our creative model while keeping what makes it distinctive. We need enough structure to protect people, manage resources, record learning, show impact and deliver responsibly. We also need room for the experimentation, responsiveness and collective energy at the heart of TCPS.

The next phase is therefore not simply about doing more. It is about becoming more deliberate about what we do, who carries it, why we do it, and what each project leaves behind.

That is the foundation required to move from Phase Zero towards the Induction Centre and beyond.

Small-scale, site-specific work can have a lasting impact.

The Control Room showed that a carefully designed public project can draw a strong response with limited resources. In 2026/27, TCPS will develop work that adapts to each place and puts experience, curiosity and cultural impact first.

Connections, systems, and capacity form infrastructure.

Better work depends on early engagement with mana whenua, partnerships that benefit both sides, clear roles and good records. It also depends on what volunteers can realistically take on. In 2026/27, TCPS will strengthen these foundations to

The Watcher world creates a reason to return.

The Watcher, Sequence and emerging mythology are becoming a recognisable creative language for TCPS. Next year, we will develop this framework across activations, communications and opportunities for participation.

Participation is a pathway, not a single moment.

The Control Room showed the potential for audiences to become Watchers, volunteers, Members and contributors. TCPS will design future projects with clearer pathways for people to stay connected and become part of the wider network.

Every activation should leave something behind.

Projects create more than an event: they generate knowledge, imagery, data, partnerships and new capability. The Induction Centre and future activations will be used to build a stronger archive, clearer systems and reusable resources for the Collective.

Closing Transmission

The signal remains open.

Every Watcher who entered, scanned, stayed, returned, shared, carried, questioned, built, witnessed, donated, held a cable, wrote a line, moved a chair, followed a sign or believed in the signal before it was easy to explain;

ngā mihi nui

We acknowledge the

TCPS Committee
Collective
volunteers
whānau
supporters
partners
and every participant who entered the work.

Phase Zero is complete.

The Rupture has opened.

The Society now descends.
